About

Seasoned game developer with 14 years of experience uniting art, engineering, and systems design to deliver breakthrough interactive solutions. Having executed 300+ products for Y12, Amazon, and Boeing, Devon excels at front-end gameplay systems, back-end architecture, and real-time performance optimization in serious games. Devon thrives at the intersection of R&D and cross-disciplinary collaboration, leveraging emerging technologies to push boundaries in interactive training and entertainment. Ready to drive innovation and shape engaging user experiences as a versatile technical and creative lead.

Work Experience

METIL: Mixed Emerging Technology Integration Lab

Lead Game Developer, Artist & Interactive Designer

2011 – Present

Released Products:

ARTTX – Alarm Response Tactical Training Exercise: January – September 2024

Lead Developer, Art Director, Project Manager

Developed and lead the design and production of a role-based, multidisciplinary AR-driven Radiological training experience supporting 20 users, leveraging Unity services and OpenXR, high performance on low-power devices; delivered a dynamic multi-platform solution praised by the client as “This is solid.”

- Developed an approach to utilizing an LLM for development achieving 5.6x faster load times and 25x–6,000x performance gains in custom solutions reducing overall development time by 25%.
- Devised a custom pathfinding solution accommodating unique scale ratios for specific client requirements operating at 1.3ms on average through all scenario command calls and quantities.
- Implemented multiplayer using NGO and utilized Unity services such as Authentication, Lobby and Relay supporting up to 20 concurrent users with minimal latency (<50ms).
- Engineered a dynamically adjustable render texture camera scheduler for real-time texture rendering distribution, enhanced performance by 320% over the default render texture system.
- Responsible for all development, project scope, and lead the re-use of the Digital Twin Interactive map assets reducing art production hours by 40% overall.
- Designed and implemented all UI elements, seamlessly connecting to backend services improving user experience by 60% by reducing error rates and communication to end user.

- Developed a no-code narrative-first scenario authoring approach using a custom command framework for narrative events and dynamic triggers, while maintaining an editable, expandable, and layman-friendly system within the editor.
- Facilitated goal alignment and maintained a positive client relationship through clear, consistent weekly communication.

VAPPE: 2021 - 2023

Lead Front-End Developer & Art Director

Designed and implemented art, front end gameplay interactions and engineered backend scenario authoring ingestion for a real-time scenario-based application, currently available on the Apple Store.

- Engineered front-end framework and back-end scenario ingestion utilizing a custom scenario authoring framework, for real-time remote CSV ingestion of scenarios.
- Directed overall vision and branding, ensuring consistency and high-quality visuals that align with VA standards.
- Developed character controllers supporting diverse real-time skinned equipment and clothing, seamlessly identified through scenario data.
- Created a no-code scenario authoring tool empowering SMEs and designers to rapidly iterate during a health crisis—enabling flexible scenario sequencing without added overhead. [Reduction in development time?]
- Supported 60 scenarios, each comprising 30 - 60 steps, 46 interactable equipment pieces, and a narrator guiding every step.
- Ensured 508 compliance and delivered a dual-platform release on IOS and Web through VA servers, establishing a new standard for PPE training.

SMART Interactive Scenario: 2023

Game Designer & Lead Developer

Conceptualized product and lead a team of developers and artists to create a customer-facing web portal, enabling remote scenario editing and authoring of real-time Unreal content. 2023

HaptX Glovebox Scenario: 2022 – 2023

Technical Artist, Developer, & Art direction

Responsible for the implementation and direction of art assets, along with the development of a Glovebox digital twin system, supporting multiplayer and HaptX gloves. 2022 – 2023

Digital Twin Interactive Map: 2022 – 2023

Lead Game Developer & Technical Artist

Responsible for the accuracy of art assets and their implementation, along with the design and development of interactions and features within the front-end and back-end utilizing Unreal Engine.

- Created a data mapping pipeline to utilize client provided architectural documents, enabling autonomous updates of spatial information and dynamic structure labeling, all during the construction of the building.
- Created a user-centric navigation system, featuring dynamically generated paths between any 2 rooms with accessibility preference over 2 floors.

Technical Skills

- Game Engines: Unreal Engine, Unity, OpenXR, Monogame
- Programming Languages: C# (Expert), C++ (Intermediate), JavaScript (Basic), Python (Basic)
- 3D Art & Animation: Blender, Maya, zBrush, Substance
- 2D Art & UI Design: Affinity Suite, Photoshop, Illustrator, After Effects
- Version Control & Development Tools: Git, Perforce, Jira, Visual Studio, Unity Cloud Services

Education

- Bachelor of Fine Arts - University of Central Florida - 2011
- Associate of Arts - Palm Beach State College – 2008
